

COMP 8005 ASSIGNMENT 2 DESIGN DOCUMENT

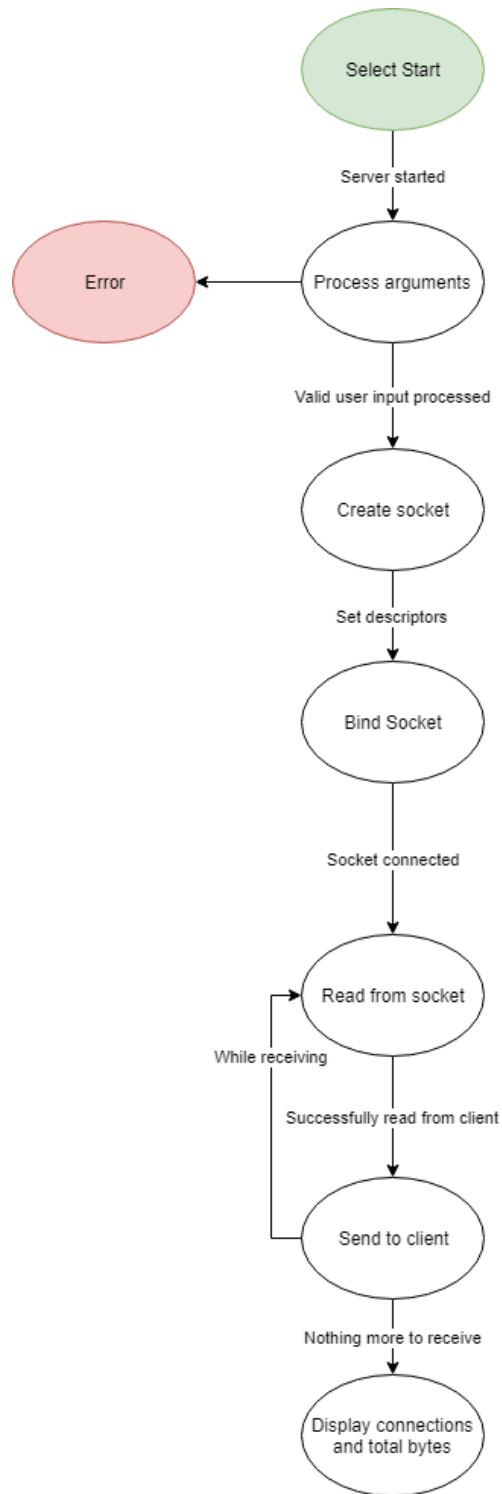

Yiaoping and Anthony

JANUARY 30 2018

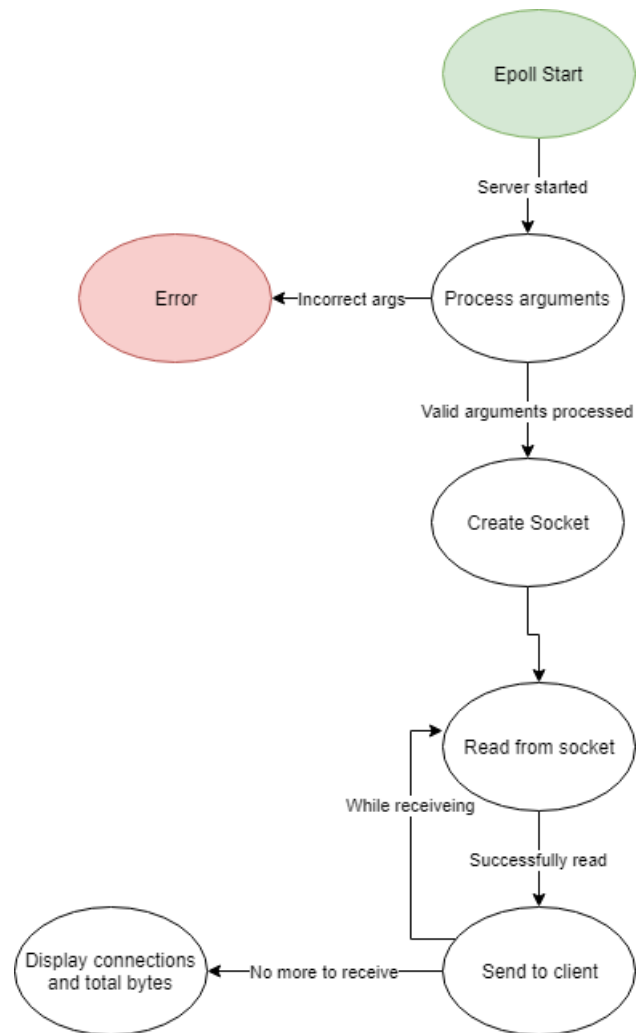

Multithreaded Server Design:

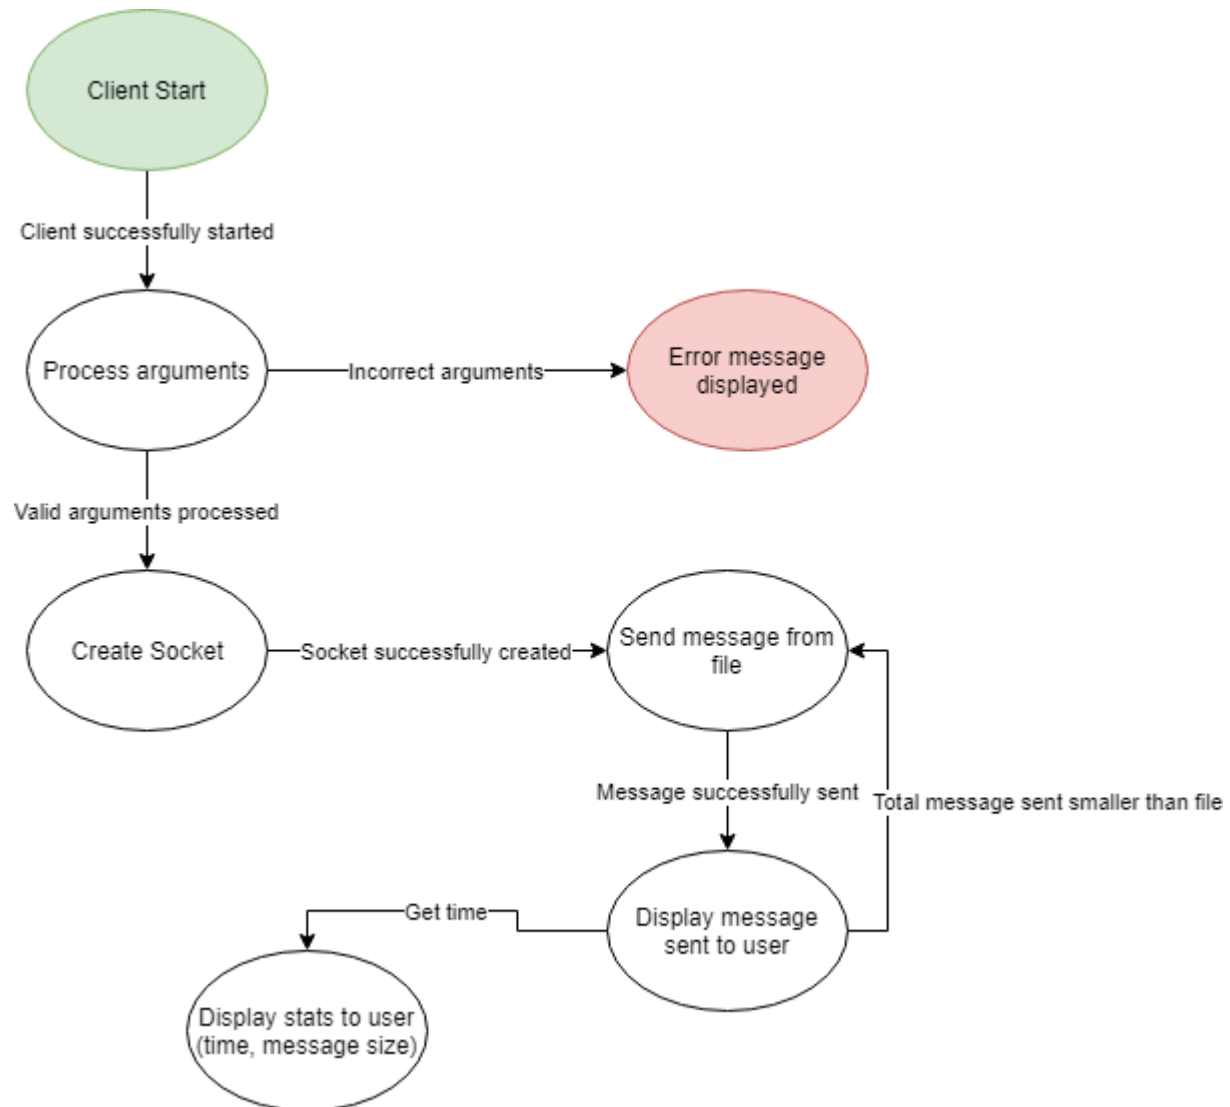

Select Server Design

Epoll Design

Client Design:

Pseudocode

Multithread

Get user arguments

 if user displays incorrect arguments

 display error message

Main

 Pass in server information to ThreadingMixIn library

 run thread_handler

 Handle client requests until shutdown is told, polling for shutdown

 Display stats to user

thread_handler

 while true

 if data being received

 create thread

 append thread to thread array

 join threads

 display message to user

 if send data back fails

 display sending error message

 Cleanup threads

Select

Get user arguments

 If user arguments incorrect

 Display error message

Make socket selector select

Create socket

 Accept connection

 Bind socket

 Set non-blocking

 while true

 Read from socket

 Display current number of connections

Display stats on server kill

 Time displayed

Read

 Receive buffer from socket of buffer size

 If data being received

 store data array

 send array

else close socket

Epoll

Get user arguments

 If user arguments incorrect

 Display error message

Make socket selector EPoll

Create socket

 Listen for connection from client

 Accept and bind socket

 Set non-blocking socket

while true

 Read from socket

 Display active connections to user

Display stats on server kill

 Time displayed

Read

 Receive buffer from socket of buffer size

 If data being received

 store data array

 send array

else close socket

display message to user
